Description

The ASL2007M2 is a 6-bit digital phase shifter GaAs MMIC module designed to operate from 5.0 to 6.5 GHz. The module features a integrated TTL driver that provides the necessary digital interface for a six bit control. The module operates on +5/-5V supply voltages with minimal current consumption.

The phase shifter has a RMS phase error within 4 deg in the designated band. The insertion loss is 8.5 dB (max.) and varies within ±1.5 dB over the band and the 64 states. The input power for 1 dB compression is 23 dBm. The RF ports are well matched to 50 Ohms. The module is rugged in construction and uses SMA connectors for the RF ports and a 15-pin standard D-type connector for the control interface.
